

SERVER 630

SEASON 2 EVERFROST

MASTER GUIDE

Prepared by WEDEL, LEEROY & FURRYWARRIOR

SERVER 630 SEASON 2 EVERFROST MASTER GUIDE

Expanded base guide for Server 630

Prepared by WEDEL, LEEROY & FURRYWARRIOR

IMPORTANT NOTE ABOUT THIS GUIDE

This document is a base guide for Season 2 Everfrost. The information comes from Season 2 materials from players on servers 405-435. Exact values, names, and rewards should always be confirmed in the game, because they may differ between servers and season versions.

Table of Contents

ITEMS TO CONFIRM AFTER SEASON 2 STARTS	21
VOCABULARY	22

1. The Main Idea of Season 2 Everfrost

Season 2 Everfrost is not won with one strong attack. It is won through rhythm: entering the map, quickly unlocking seasonal buildings, using stamina wisely, completing daily monsters, growing Resistance, and keeping the whole alliance active. The most important thing is not to waste moves from the very first minutes.

- Greenhouse provides Ice Bloom production and drives building progression.
- Bio Lab provides Virus Resistance, which allows you to attack higher NPC levels and take harder objectives.
- Frostbanes/Boomers are the main source of Ice/Frost Cores and must be done every day.
- Tiles in Season 2 matter because they build map progress, access to higher levels, and the path toward cities.
- Stamina/fuel is the most valuable Day 1 resource. Do not spend it randomly.
- Alliance activity, rally timing, and coordination matter more than solo ego.

Server 630 Rule
Foundation first, speed second. Day 1 is not a day for showing off. Day 1 is for unlocking the system, entering the season rhythm, and preparing an advantage for Day 2.

2. Day 1 Master Plan

The plan below is the basic opening order. It is not only about following a list, but also understanding why the order matters. Season 2 starts fast. Anyone who wastes stamina in the first hours will spend the rest of the day catching up.

FL2 SEASON 2 DAY-1 MASTER PLAN

THE 14-STEP BLUEPRINT TO GET AHEAD

★ FOLLOW THIS EXACT ORDER. DON'T SKIP. DON'T WASTE STAMINA.

1

ENTER EVERFROST IMMEDIATELY
✗ Don't touch anything on the home map.
✗ Don't collect anything.
✗ Don't kill anything.
→ Go straight into the Season 2 map.
WHY? Your Season Base spawns instantly, and you want to start building Resistance ASAP.

2

TAKE YOUR FIRST TILE (LEVEL 1 OR 2)
This unlocks:
✓ Your Greenhouse
✓ Your Bio Lab
✓ Your Frostbane chain
✓ Your Resistance progression
★ Do NOT skip this.
✗ Do NOT try to take a high tile first.

3

BUILD YOUR FIRST GREENHOUSE
This is the engine of your entire season.
★ Greenhouses = Resistance
★ Resistance = stronger tiles
★ Stronger tiles = faster progression
★ Faster progression = earlier cities
→ Build it immediately.

4

UPGRADE YOUR BIO LAB TO LEVEL 1
This unlocks:
✓ Frostbane kills
✓ Ice Bloom production
✓ The entire Season 2 progression loop
You cannot progress without this.

5

KILL YOUR FIRST FROSTBANE
This gives:
✓ Ice Blooms
✓ Frost Cores
✓ Bio Lab XP
✓ Resistance
Do NOT waste stamina on anything else.

6

UPGRADE BIO LAB AGAIN (LEVEL 2)
Use the Ice Blooms you just earned.
This unlocks:
✓ Higher Frostbanes
✓ Higher tile levels
✓ Faster Resistance gain
Your goal is to hit Bio Lab 3 on Day 1.

7

TAKE HIGHER TILES (LEVEL 3 → 4 → 5)
The correct progression is:
 → → →
✗ Do NOT jump to Level 6 on Day 1 — it's a trap.

→ → →

8

BUILD YOUR SECOND GREENHOUSE
This is where you start to snowball.
✓ Two Greenhouses = double Resistance
✓ Double Resistance = faster tile unlocks
✓ Faster tile unlocks = earlier city access
★ This is the moment most players fall behind. You won't.

9

KILL YOUR SECOND FROSTBANE
This pushes you toward:
✓ Bio Lab 3
✓ Level 5 tiles
✓ Early progression advantage
★ Your Frostbane kills are your daily heartbeat.

10

UPGRADE BIO LAB TO LEVEL 3
This is the Day-1 milestone.
If you hit Bio Lab 3 on Day 1, you are ahead of 80% of your server.
This unlocks:
✓ Level 6 tiles
✓ Stronger Frostbanes
✓ Faster Resistance
✓ Early city participation

11

TAKE LEVEL 5 TILES UNTIL STAMINA RUNS OUT
Do NOT:
✗ Take Level 6 tiles yet
✗ Waste stamina on Frostbanes above your level
✗ Spread tiles randomly
Focus on:
✓ Level 5 tiles
✓ Compact cluster
✓ Efficient stamina use

STAMINA 100%

12

BUILD YOUR THIRD GREENHOUSE (IF POSSIBLE)
This depends on:
✓ Your tile income
✓ Your Frostbane drops
✓ Your activity window
★ If you can build it on Day 1, you are in the top 10% of players. If not, build it early Day 2.

13

CHECK ALLIANCE CHAT FOR RALLY TIMING
If your alliance is organised, you'll have:
✓ A Frostbane rally
✓ A tile-unlock rally
✓ A city-prep rally
★ Join whatever is available.
If not, don't worry — Day 1 is mostly solo progression.

14

SPEND ALL STAMINA BEFORE LOGGING OFF
Stamina is the most valuable resource in Season 2.
Do NOT end Day 1 with stamina left.
Use it on:
✓ Tile
✓ Frostbanes
✓ Bio Lab XP
USE IT ALL. DON'T WASTE IT.

BIO LAB 3 ON DAY 1

LEVEL 5 TILES ON DAY 1

LEVEL 6 TILES EARLY DAY 2

★ IF YOU FOLLOW THIS EXACT ORDER, YOU WILL:

- ★ Hit Bio Lab 3 on Day 1
- ★ Hit Level 5 tiles on Day 1
- ★ Hit Level 6 tiles early Day 2

FL2

GREENHOUSES = RESISTANCE → BIO LAB = PROGRESSION → FROSTBANES = POWER → EARLY PROGRESSION = EARLY CITIES

Day 1: First Minutes

1. Enter Everfrost immediately when the season starts. Do not begin on the home map.
2. Do not collect random things, do not attack unnecessary targets, and do not use stamina outside the seasonal plan.
3. Take your first easy Level 1 or Level 2 tile to unlock the seasonal progression system.
4. Build Greenhouse #1 immediately after it becomes available.
5. Upgrade Bio Lab to Level 1, because without Bio Lab you cannot start the proper Resistance loop.
6. Kill your first Frostbane/Boomer at a level you can handle without wasting stamina.
7. Upgrade Bio Lab to Level 2 and start pushing progression: Level 3, then 4, then 5 tiles.

Day 1: Second Half of the Day

8. Build Greenhouse #2 as soon as resources and the system allow it.
9. Kill your second Frostbane/Boomer and continue working through the daily attempt limit.
10. Upgrade Bio Lab to Level 3. This is the main Day 1 milestone.
11. Take Level 5 tiles as long as your stamina is being used efficiently.
12. Build Greenhouse #3 if you can realistically do it on Day 1. If not, set it as an early Day 2 goal.
13. Watch alliance chat for rally timing, Yeti, Frostbane rallies, and important R4/R5 callouts.
14. Do not end Day 1 with unused stamina. Stamina left at the end of the day means lost progress.

Day 1 Targets

Target	Meaning	Comment
Bio Lab 3	Main progression milestone	Gives a better Resistance rhythm and prepares Day 2.
Level 5 tiles	Safe and efficient Day 1 target	Level 6 is usually not a Day 1 target for most players.
Greenhouse #2	More production and faster Ice Blooms	The sooner production starts, the better for the whole season.
Frostbane/Boomer daily cap	Steady flow of cores and snowflakes/snowballs	Do not skip it, because resources will be missing later.
Compact Cluster	Better map control	Do not scatter tiles randomly across the map.

Day 1 Warning

Do not jump into Level 6 tiles just because they look better. If they cost too much stamina or slow down your foundation, they are a trap. First Bio Lab 3, Level 5 tiles, Greenhouse, and the daily Frostbane rhythm.

3. Resources and the Basic Progression Loop

The entire season is built around a few resources and dependencies. Once players understand the loop, they will stop asking what to do after every click.

Resource / Element	What it is used for	How to treat it
 Ice Blooms	Upgrading seasonal buildings, especially Bio Lab and Greenhouse.	Passive Greenhouse production is the foundation. Do not spend without a plan.
 Ice Cores / Frost Cores	Upgrading Greenhouse and driving production.	Spend quickly on Greenhouse, because cores alone do not create an advantage; production creates speed.
Snowflakes	Creating Snowballs and progressing Snowman Mania.	Collected from monsters and activities. Do not ignore daily.
 Snowballs	Leveling Snowman and seasonal buffs.	Do it daily, clear snow from allies, and do not miss resets.
 Virus Resistance	Allows you to hit higher NPCs and unlock harder targets.	The most important progression threshold. Built through Bio Lab and other bonuses.
Stamina / Fuel	Attacking, tiles, monsters, events.	The most valuable operational resource. Do not burn it on Day 1.
Season Points / Personal Glory	Ranking, chests, passive rewards, and final score.	Built through regular NPCs, events, and Glory Wars.

Main Progression Loop

- Hit Frostbanes/Boomers and complete the daily attempt limit.
- Gain Ice/Frost Cores.
- Spend cores on Greenhouse to increase Ice Bloom production.
- Collect Ice Blooms from Greenhouse.
- Upgrade Bio Lab and Greenhouse to increase Virus Resistance and production.
- With higher Resistance, hit higher Frostbanes/Snow Leopards and take higher tiles.
- Repeat the loop every day without wasting stamina.

Simple Rule for New Players

Not sure what to click? Check first: Bio Lab, Greenhouse, Frostbane daily cap, Yeti rally, Snowman, alliance chat. In 90% of cases, the answer will be in one of these places.

4. Seasonal Buildings and Upgrade Priorities

Smart Greenhouse

Smart Greenhouse is the engine of the season. It passively produces Ice Blooms. Every earlier Greenhouse upgrade works for the entire season, so delaying Greenhouse creates a loss that accumulates day by day.

- Build Greenhouse immediately after unlocking it.
- Use Ice/Frost Cores on Greenhouse because it increases Ice Bloom output.
- More Greenhouses mean faster production and easier Bio Lab progression.
- The fifth slot from Weekly Pass can significantly speed up production, but it is not required for F2P players.

Bio Lab

Bio Lab provides Virus Resistance. Resistance determines whether you can hit higher Frostbanes, Snow Leopards, and push higher progression. That is why Bio Lab is the second pillar of the season next to Greenhouse.

- Upgrade Bio Lab immediately when you reach the Ice Bloom requirement.
- Do not leave Bio Lab behind, because it will stop your NPC and tile progress.
- Day 1 aims for Bio Lab 3, then later thresholds for higher Frostbanes.
- Support Mastery can help with Resistance, so at the start it is worth aiming for the support path.

Command Post, Icy Arsenal, Icy Fort

Building	What it gives	When to upgrade
Command Post	DMG bonus / general combat boost.	After stabilizing Greenhouse and Bio Lab, or when you lack power for higher NPCs.
Icy Arsenal	Troop ATK.	After the main Bio Lab/Greenhouse thresholds. Good for actively fighting players.
Icy Fort	Troop DEF.	After the main thresholds or when events start injuring troops harder.

Building Priority
Start: Greenhouse + Bio Lab. Only after you reach important monster and tile thresholds should you invest more heavily in military buildings. Exception: if an F2P player can no longer hit higher NPCs due to lack of power, military buildings can help break through the wall.

5. Tiles, Resistance, and Map Progress

In Season 2, tiles are part of progression. It is a mistake to treat them as random fields. Every tile should have a purpose: leading to greater production, unlocks, cities, or a compact alliance cluster.

Day 1 Tile Progression Order

Stage	What you do	Why
Level 1 or 2	First easy tile immediately after entering Everfrost.	Unlocks the system and lets you build the foundation.
Level 3	First real progression step.	Does not burn stamina, but pushes the season forward.
Level 4	Stable middle of Day 1.	Prepares Level 5 without too much risk.
Level 5	Main Day 1 target.	Good balance of cost and progress.
Level 6	Most often early Day 2.	Day 1 can be a trap if Resistance is missing or it costs too much stamina.

Compact Cluster

Tiles should be taken in a compact layout. Scattered tiles may look like progress, but strategically they are weak. A compact cluster makes paths, map control, later cities, and alliance coordination easier.

- Do not take random tiles far away from the cluster.
- Do not block alliance paths if R4/R5 are leading the route.
- If you do not know where to go, ask in alliance chat before burning stamina.
- First build a stable path, then expand.

6. Frostbanes, Snow Leopards, Yeti, and Other Targets

Frostbanes / Boomers

Frostbanes, often called Boomers, are one of the most important daily targets of the season. They give Ice/Frost Cores, snowflakes/snowballs, and progress. Skipping them leads to resource shortages and slower Bio Lab/Greenhouse development.

- Week 1: aim for the full daily cap; the materials mention 30 attempts.
- Week 2+: the materials mention 15 attempts with double rewards.
- Hit the highest level that is efficient and does not burn too much stamina.
- If your Bio Lab finishes upgrading the same day, save some attempts so you can hit a higher level after the upgrade.
- Join rallies when the alliance is doing shared targets, especially for first-hit rewards.

Snow Leopards (Zombie)

Snow Leopards are useful, but usually less efficient than Frostbanes/Boomers. According to the materials, they give fewer cores and consume attempts similarly to Frostbanes, so they should not come before the Boomer cap.

- Frostbanes/Boomers first.
- Do Snow Leopards after the Boomer cap, or for first clear / specific tasks.
- Do not hit levels that are too high if the cost is disproportionate.
- Check Resistance and damage reduction.

Yeti

Yeti is the main seasonal raid boss. It is attacked through rallies. It gives seasonal rewards, snowballs/BP/resources, and requires alliance coordination.

Rule	Description
Number of attempts	Usually 2 Yeti per day; during Sunday Endless Night, 5 Yeti rallies.
Level	The higher the Yeti, the better the rewards, but fuller rallies and stronger marches are needed.
Rally time	For high Yetis, set 10 or 30 minutes to fill marches.
Targeting HQ	If Yeti targets your base, start a rally on the Yeti and cancel it. This should reset the target.
HP Yeti	Avoid Yetis with reduced HP if they may be another alliance's target. It is better to look for full HP or ask leaders.

Glacier Kong / FuryLord and Stronger Targets

The materials also mention stronger targets such as Glacier Kong/FuryLord. Their exact availability may depend on the season version. Treat them as coordinated targets, not solo farming.

- Do not waste attempts or stamina without an alliance call.
- If the reward depends on the last hit, set the priority in alliance chat.
- Very strong targets require parallel rallies and fast communication.

7. Seasonal Events

Sunday Endless Night

On Sunday, the number of Yeti rallies increases to 5. This is the day when the alliance should hunt more deliberately: stable levels first, then the highest possible target at the end once we know how much power is online.

- R4/R5 should set rally time windows.
- Do not split activity across 20 random Yetis.
- High-level Yetis should be done with full marches.
- Players who have already completed their daily Yeti can still help others in rallies.

Glory Wars

Glory Wars are an alliance event. According to the base document, they start on Tuesdays from Week 4. R5/R4 choose the opponent on Monday and set the truce time: 9:00, 18:00, or 22:30. The objective may be to destroy the enemy AC1, but be careful that winning too quickly does not take personal rewards away from members.

- R5/R4 choose the opponent and time.
- Before the start, assign roles: offense, defense, rally leaders, reinforcements.
- Do not randomly destroy structures without a command.
- If we make a TvT deal, let people collect personal rewards first, then finish AC1.
- A win may give part of the opponent's season points, so activity matters for ranking.

Ice Pit / Arctic Ice Pit / Fishing

Ice Pit combines control fighting with fishing. According to the materials, Ice Pit levels start on Monday, Wednesday, and Friday at 11:00 server time. Week 1 may be inside your own state; later the event becomes contested between states in the seasonal group.

Day	Level	Meaning
Monday	Level 1 Ice Pit	Start of the week, lower value, but important event rhythm.
Wednesday	Level 2 Ice Pit	Better fish and higher value.
Friday	Level 3 Ice Pit	Most important fishing day; save certificates/hooks.

- The fight against the Titan can injure and kill troops, so prepare healing.
- The alliance with the highest damage/capture points takes the pit.
- Even one hit can give rewards, so many players being active matters.
- Fishing uses hooks/certificates. Do not spend everything without a plan.
- Owning the pit may give a better chance at rarer fish.
- Fish in the index must be activated to claim rewards.
- Duplicate fish can be given to alliance members if the mechanic is active.

Animal Rescue / Frozen Rescue

Animal Rescue runs from Monday to Wednesday. Animals/ice sculptures give different rewards, so do not click randomly. Rewards are claimed immediately, so a wrong choice wastes the limit.

Target	Reward	Priority
	Universal/Weapon/Equipment Fragments	Top priority. Most important for development.
	Badges	Very good target, especially for F2P.
	Orange Skill Books	Medium or low priority depending on needs.
	Diamonds / fuel / small resources	Only if you need it.

- Send coordinates in alliance chat.
- If scouts can speed it up, use co-op scouting.
- Server 630 priority order: Mammoth first, then badges, then the rest according to needs.
- Do not approach an animal whose reward you do not want to claim.

Snowman Mania

Snowman Mania is a daily event based on Snowflakes and Snowballs. The materials differ in the exact buff description: the base document mentions a 5-star Snowman giving 30% troop attack and defense, while others mention Zazz Snowman at level 20 giving +3% ATK/DEF. Hit creeps/monsters for Snowflakes.

- Convert Snowflakes into Snowballs.
- Clear snow from 5 ally shelters daily if the event allows it.
- Do not skip days, because Snowman progress depends heavily on consistency.
- If a mid-season reset occurs, it is worth pushing progress early instead of waiting until the final week.

Season Journey, Battle Pass, Weekly Pass, Wartime Investment

Paid options can speed up progress, but Server 630 communication should make it clear: they are not required. An active F2P player with a good rhythm can still play effectively, especially if the alliance leads rallies and events.

Option	What it gives according to the materials	How to communicate it to players
Season Pass / Battle Pass	Ongoing benefits, rewards, sometimes heroes and resources.	Good value for spenders, not required.
Weekly Pass	Permanent perks and potentially 5th Greenhouse after purchases.	One Weekly Pass in Week 1 can greatly speed things up, but we do not pressure F2P.
Wartime Investment	Can be purchased several times; gives a Day 1 advantage and resources.	Option for spenders. Do not build the alliance strategy only around spenders.
Arctic Dual Store	Books, badges, snowballs, orange fragments for seasonal resources.	At the start, do not burn store resources if it blocks buildings.

8. Daily Checklist and Weekly Calendar

Player Daily Checklist

- Check Bio Lab and Greenhouse. Upgrade if you meet the requirement.
- Complete the Frostbane/Boomer daily cap: according to the materials, up to 30 attempts in Week 1, then 15 with x2 rewards.
- After the Boomer cap, do Snow Leopard only if it makes sense: first clear, task, extra attempts, or a specific drop.
- Do Yeti: 2 per day, 5 on Sunday. Also join alliance rallies.
- Spend Ice/Frost Cores on Greenhouse, and Ice Blooms on Bio Lab/Greenhouse.
- Do Snowman Mania: Snowflakes, Snowballs, and clear snow from alliance members.
- If Animal Rescue is active, choose Mammoth or a badges target; do not click randomly.
- If Ice Pit/Fishing is active, use hooks/certificates according to your needed fish index.
- Check alliance chat: rally timing, callouts, map objectives, and R4/R5 tasks.
- Do not end the day with full stamina/fuel if you can spend it efficiently.

Weekly Calendar

Day	Main tasks	Server 630 Comment
Monday	Animal Rescue starts, Ice Pit L1, Glory War opponent/truce prep	R4/R5 plan the week and ping priorities.
Tuesday	Glory War from Week 4 according to the base document, Animal Rescue	Do not end the event too quickly if people need personal rewards.
Wednesday	Animal Rescue ends, Ice Pit L2	Finish the rescue cap and check fish needs.
Thursday	Recovery day, upgrades, influence farming	Day for catching up on buildings and preparing for Friday.
Friday	Ice Pit L3	Most important fishing day, save certificates.
Saturday	Heal, train, prepare for Sunday	Do not leave injuries before Sunday.
Sunday	Endless Night, 5 Yeti rallies	Coordinate the highest possible Yeti and final rallies.

9. Role of Alliances, R4/R5, and Server Coordination

Season 2 rewards an active alliance more than solo players. Server 630's biggest advantage should come from information, rally timing, shared objectives, and clear instructions.

R4/R5 Tasks

- Publish the Day 1 order before the season starts and remind players in alliance chat.
- Guide people through the tile cluster and tell them where not to take random fields.
- Organize Frostbane/Boomer and Yeti rallies during peak activity hours.
- Ping daily cap resets and remind players not to end the day with unused stamina.
- In Animal Rescue, assign people to post Mammoth/badges target coordinates.
- In Ice Pit, decide who fights, who heals, who saves troops, and where to teleport.
- In Glory War, split roles before the start: rally leaders, fillers, defense, scouts, AC focus.

Regular Player Tasks

- Read alliance chat, especially at the start of Day 1.
- Do not try solo hero plays with Level 6 tiles or monsters that are too high.
- Join rallies, even if you are not top power.
- Send coordinates for important targets, but do not spam useless locations.
- Complete the daily cap and checklist, because consistency wins the season.
- Ask before spending a large amount of stamina if you do not understand the mechanic.

10. Mistakes to Avoid

Mistake	Why it hurts	Better solution
Starting on the home map	Wastes the first minutes and may burn stamina.	Enter Everfrost immediately.
Random collecting and killing before the season system	Does not build proper progress.	First tile, Greenhouse, Bio Lab, Frostbane.
Jumping into Level 6 on Day 1	Often costs too much and blocks the foundation.	Day 1 target: Level 5, Bio Lab 3.
Ignoring the Frostbane cap	No cores, slow Greenhouse and Bio Lab.	Do the cap daily, after Bio Lab upgrade if it is worth waiting.
Snow Leopards before Boomers	Less efficient rewards for similar attempt cost.	Boomers first, Leopards after.
Scattered tiles	Weak strategic layout and lost paths.	Compact cluster and direction from R4/R5.
Ending the day with full stamina	Unused resource = lost progress.	Spend it efficiently before logging out.
Buying in the store before buildings	Delays production and Resistance.	Buildings first, store later.
Not joining rallies	The alliance loses speed and rewards.	Join calls, even with a small march.

11. Unverified Information

Items to confirm after Season 2 starts.

- Whether the resource name in our server UI is Ice Cores or Frost Cores.
- Whether Snowman gives 30% ATK/DEF at 5-star, or Zazz Snowman gives +3% ATK/DEF at level 20, or whether these are two different bonuses.
- Whether Glory Wars start exactly in Week 4 for our version of Season 2.
- Whether the Week 1 and Week 2+ attempt limits match the in-game UI.
- Whether Animal Rescue names are Deer/Elk/Cold Hoof and Boar/Hog/Pig.
- Whether Weekly Pass actually activates the 5th Greenhouse in the described way on your server.

Vocabulary

Term	Meaning
Everfrost	Seasonal snow/ice map.
Greenhouse	Building that produces Ice Blooms, the foundation of the season economy.
Bio Lab	Building that provides Virus Resistance and seasonal progression.
Virus Resistance	Stat that determines available NPC levels and progression.
Frostbane / Boomer	Main daily monster for cores and seasonal resources.
Snow Leopard	Seasonal monster, usually less efficient than Frostbane/Boomer.
Yeti	Seasonal raid boss done through rallies.
Ice Pit	Event for pit control and fishing.
Snowman Mania	Daily event with Snowflakes and Snowballs.
Compact Cluster	Compact tile occupation without random scattering across the map.
Rally timing	Set times/windows for shared alliance rallies.
F2P	Free to play, a player who does not spend money.
